RESEARCH PROFILE

I work on medical image segmentation and learning across PET, CT and MRI. My clinical research focuses on cancer, fatty liver disease and multi-organ metabolism.

EDUCATION

Peking University PhD in Medical Technology	September 2023-present
King's College London MSc in Artificial Intelligence, with Distinction	2019-2020
Xiamen University BSc in Automation; second bachelor's degree in Mathematical Finance	2015-2019

CHALLENGE RESULTS AND RESEARCH FUNDING

autoPET V: second place in Category 1 MICCAI autoPET V challenge, interactive PET/CT lesion segmentation.	2026
CMR-MULTI: second place Multi-sequence cardiac MRI segmentation. Method paper selected for a CMRSeg challenge oral presentation.	2026
REG²: fourth place Method paper selected for a MICCAI 2026 challenge workshop poster.	2026
NSFC doctoral research project Principal investigator of a project on extracting and analysing multi-organ metabolic information from total-body PET/CT.	2026-2027, NSFC grant for doctoral students

PROFESSIONAL EXPERIENCE

AirDoc Algorithm Engineer Developed a model to predict the gap between an implanted ICL lens and the natural lens after surgery, using eye measurements and lens size. Worked on ultra-widefield fundus image analysis, clinical requirements and medical-device registration.	July-September 2022
BioMind Medical Imaging Algorithm Engineer Developed cardiac ultrasound models for image quality assessment, Doppler segmentation and measurement, septal defect detection and valve regurgitation analysis. Worked with clinicians to integrate models into an ultrasound-assisted diagnosis system. Also contributed to an ovarian-tumour ultrasound system.	November 2020-June 2022
